

Midterm - INTD262

Dr. Jordan Hanson - Whittier College Dept. of Physics and Astronomy

October 18, 2024

1 Unit0

1. Offer some reasons why the Spaniards created the virreynatos of Nueva España and Perú in their respective locations, with Tenochtitlan and Lima as capital cities.

They wanted to have a place for money and capitalism to grow from natural resources, environment, and pre-built civilization

2. Was there a link between the introduction of capitalism and the growth of scientific activity in Latin America, or did the growth of modern science precede capitalism?

Yes, because it led to better medicine, practice, and agriculture

3. Given the definition of peripheral scientific activity in the Introduction, can you give an example of the creating and transmission of scientific results from the periphery to the center of science?

The medicine for malaria

4. Give some examples of pseudo-scientific beliefs regarding mythical places the colonials sought in the New World.

Some examples is the Fountain of Youth and the Load of Riches relating to biblical times

5. **Multiple Choice - Nahua scientific activity, first period**

(a) Which of the following were media through which inhabitants of the Mexica empire recorded scientific observations about the natural world?

- A: Axolotl (codices) and huitzitzilin (paintings, stelae)
- B: Amoxtl (codices) and tlacuilo (paintings, stelae)
- C: Tomatl (plume, writing tool) and altepetl (city-state)
- D: Quetzal (plume, writing tool) and huitzitzilin (city-state)

(b) Using information from *Historia natural y moral de las Indias* (de Acosta), *Historia general y natural de las Indias* (Oviedo), *Décadas del Nuevo Mundo* (Anglería), *Historia de Nueva España* (Hernández), match the European story to the indigenous story or piece of knowledge.

- (1): Ponce de León and the Fountain of Youth
- (2): Griffins so large they capture people and calves as prey, with feathers as large as an arm.
- (3): "A fountain running with hot water and as the water runs it turns to stone."

- (4): “fish that as they leave the water turn into butterflies.”
- (5): “...a monstrous animal, with the face of a fox, a tail of a cercopithecus, ears of a bat, human hands, and feet of a monkey.” Carries young on the belly.
- A: A flying fish
- B: A condor
- C: A mercury mine
- D: The belief about a certain river among the Lucayo and Carib indigenous
- E: The Mexican opossum

Answer: 4:A, 2:B, 3:C, 1:D, 5:E

6. **Nahua scientific activity, second period**

(a) Father Bernardino de Sahagún translates from Nahuatl a description of a “tiger” that the indigenous say can do the following: (a) see small things even though there is fog or darkness (b) creates sounds “through the air” to intimidate hunters. What does this writing tell us about the Nahua understanding of physics?

They understood sound wavelengths as sound would bounce off and light refractions

(b) Why did the Spaniards and Aztec believe that hummingbirds were connected to immortality?

The Spaniards and Aztecs saw the hummingbird as symbols of resurrection and energy, therefore, when someone had passed away, they would be brought to life similar to the hummingbird waking up after its hibernation state. During the hibernation state, their heartbeat, breathing, and metabolism would slow down so much that they were considered almost dead

7. Suppose the following statement is given: “If someone was born between 1945 and 1991, then they have Strontium-90 in their bones.” Which of the following statements is deductively valid?

- Adam was born in 1963. Therefore, Adam has Strontium-90 in his bones
- Eve has Strontium-90 in her bones. Therefore, Eve was born between 1945 and 1991.

8. Consider the following passage from Chapter 1 of The Scientific Attitude:

In 1981, the state of Arkansas passed Act 590, which required that public school teachers give “balanced treatment” to “creation science” and “evolution science” in the biology classroom. It is clear from the act that religious reasons were not to be offered as support for the truth of creation science, for this would violate federal law. Instead, the curriculum was expected to concentrate only on the “scientific evidence” for creation science. But was there any? And, how precisely was creation science different from creationism?

Explain the arguments used in court to thwart Act 590 the following year.

Not everything that is science can be falsified. We can't make a perfect experiment from the scientific method

9. Thomas Kuhn wrote a famous book entitled The Structure of Scientific Revolutions (1962). Rather than describing science as a global accumulation of progress, he argues that, sociologically, scientists move

between periods of “puzzle-solving” within an accepted framework and revolution triggered by unavoidable experimental anomalies. (a) Give one example of a scientific revolution, and note the anomaly. (b) Do you think that the colonization of Nueva España triggered a scientific revolution?

(a) The structure of DNA genetics

(b) Yes because new data, indigenous knowledge

10. Fill in Tab. 1 below, using Fig. 1.

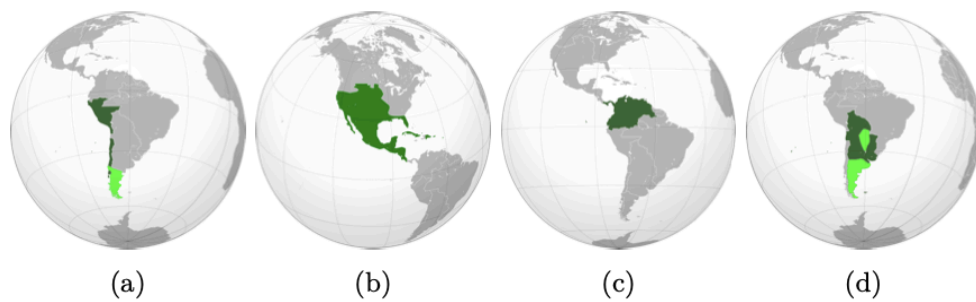

Figure 1: Maps depicting *virreïnatos* in Latin America, 17th and 18th centuries.

Map in Fig. 1 (a-d) Virreinato Capital Nueva España

Map in Fig. 1 (a-d)	Virreinato	Capital
b	Nueva España	Mexico City
c	Nueva Granada	Santa Fe de Bogata
d	Rio de la Plata	Buenos Aires
a	Peru	Lima

Table 1: Fill in the missing information.

11. Consider the library of José Ignacio Bartolache. (a) What does the distribution of texts in this library tell us about the scientific attitude of Latin Americans in the 18th Century? (b) What other scientific items did Bartolache own, and what clues does this add to our picture of the scientific attitude in that time and place? (c) Considering these collections were built before 1760, draw a comparison to the state of science in the American colonies (later the United States).

(a) cross knowledge of different topics

(b) he owned scientific machines or inventions such as scales and telescopes

(c) Universities were built for a long while

2 Unit 1

1. In Chapter 2 of The Scientific Attitude, we encounter the following quote:

Samir Okasha recounts the example of John Couch Adams and Urbain Le Verrier ... they were working (independently) within the Newtonian paradigm and noticed a slight perturbation in the orbit of the planet Uranus.

Newton's Law of Gravity predicts perfectly elliptical orbits for the planets, with no perturbations. Was the law of gravity therefore falsified? What solved the problem in the end?

Yes but then it was justified by Albert Einstein

2. **Bode's Law** was an attempted mathematical explanation of the planetary orbits. Bode's sequence was the pattern 0, 3, 6, 12, 24, ..., plus 4 to each, then divide the sequence by 10. The result is 0.4, 0.7, 1.0, 1.6, 2.8, 5.2, 10.0, 19.6, 38.8, 77.2, At the time (1772), the radii of the planets from the Sun were 0.387, 0.723, 1.0, 1.524, 5.203, 9.539. Nine years later, Uranus was discovered at 19.18. Twenty years later, the asteroid belt between Mars and Jupiter was discovered at 2.77. Did Bode's Law become a scientific fact because it fit the data?

Yes and no because they found it was correlated, but had to find an explanation and was falsified

3. In 1761, Judge Francisco Javier Gamboa created a set of legal and scientific studies that were meant to reform the mining industry, to make it more efficient. Recall some scientific results that he shared within his *Comentarios a las ordenanzas de minas*. What chemicometallurgical technique, important for ore extraction, did he share with The Crown? What institutions did he suggest creating?

Using a patio process to get the natural ores, creation of schools. He suggested creating an institution of mining

4. *El Real Seminario de Minería* was created by Joaquín Velázquez de León, Fausto de Elhúyar, and others. However, several factors might have driven it to bankruptcy. Describe the Mexican efforts to preserve it.

They tried reusing certain resources and opening more trade routes to other countries. They hired miners as professors whenever there was a shortage. Mine owners and guilds helped donate, fund, and transcribe texts. The Institution gave rise to new minors and engineers

5. What are the two tenets of the scientific attitude, or ethos, according to the author of The Scientific Attitude?

One tenet is to care about empirical evidence. Another tenet is willing to change based on evidence

6. Recall the story of Ignaz Semmelweis and antiseptic handwashing in maternity wards. Discuss how the scientific attitude was applied in this situation.

He kept making hypotheses based on his current knowledge of the situation and as new evidence arise, then he made a new hypothesis and tested it. If the evidence didn't fit his hypothesis, he either trashed it or revised a new one

7. Recall the story of the false discovery of cold fusion. (a) Discuss how the scientific attitude was not applied in this situation. (b) Now select a piece of science from Latin American history that we have encountered thus far, and apply the criteria of the scientific attitude to it.
 - (a) Instead of the evidence being revolved or changing the theory/hypothesis, it was the opposite as the made a huge theory that was debunked for false evidence later in the months
 - (b) Doctors who "cured" diseases was considered a good doctor, while the doctors who used other herbal medicine that wasn't as effective was seen as "bad" doctors

3 Unit2

1. (a) In what viceroyalty (Fig. 1) was the city of Santa Fe de Bogotá? (b) Discuss the scientific implications of the "half century-long polemic on Copernican theories, which started in 1773 between José Celestino Mutis and the Dominican Congregation of Santa Fe de Bogotá. (c) In 1783, the Expedición Botánica began in Santa Fe. What were some of its goals and achievements?

(a) In Nueva Granada

(b) Dominicans didn't like Copernicans view as Copernicans said the earth was heliocentric and implied there was no God which was led conflict between science and religion

(c) Some of its goals was finding the borders of the Nueva Granada and traveling for botany herbs

2. (a) In what viceroyalty (Fig. 1) was the city of Caracas? (b) In 1767, the Jesuit order was expelled from the Spanish colonies. The Dominican order recovered authority over some colleges and universities. What was the implication for science?

(a) from Peru

(b) this led to conflict of religion versus science teaching styles in colleges... limitations of theChurch

3. What scientific publication was created by José Celestino Mutis?

The Expedition Botanica

4. Evaluate the logical truth of this claim: “anti-vaccination campaigns do not have the scientific attitude, therefore these are not scientific endeavors.”

There is no concrete evidence supporting their claims against vaccinations. When they are presented with evidence that goes against their hypothesis, they refuse to believe it or change/trash their own hypothesis.

5. Discuss one example we have encountered from our scientific history that should count as science, even though it has not traditionally been considered scientific.

One example would be the hummingbird classification because even though there isn't any numerical evidence, they are grouping organisms based on their physical characteristics and are still considered to be scientific.

6. In Chapter 3 of Science in Latin America, we encounter the following quote:

La Universidad Gregoriana in Quito alone had “seventy-one foreign professors teaching at the university ... Native professors were twenty-one, of whom five were from Loja, four from Quito, three from Guayas, three from Cuenca, three from Riobamba, two from Ibarra, and one from Ambato.” ... As a consequence, it is not strange that in a center of cultural ferment such as Quito, intellectual Jesuits were most closely linked to the Franco-Spanish geodetic mission directed by La Condamine and Jorge Juan.

(a) What scientific transition began to take place as a result of the interaction between foreign and Ecuadorian professors? (b) What can we infer about the ratio of the native professors at the university? (c) Consider Father Francisco Javier Aguilar, who taught physics and mathematics at Universidad Gregoriana. He taught no less than five world systems, and focused on three: Ptolemaic, Copernican, and Tychonic. What distinguished these?

(a)

(b)

(c)

7. In 1767, Mutis published Reflexiones sobre el sistema tyconico. (a) What were the main points of this publication? (b) Was it considered controversial?

(a) Geographical mapping of the tectonic plates

(b)

8. When Joaquín Velázquez de León and José de Gálvez arrived in Baja California, they remained there for three years. (a) What types of measurements did they make? (b) How did this improve local knowledge of Nueva España? (c) Velázquez de León communicated with Chappe d’Auteroche that he would help with the Venus transit measurements, and d’Auteroche suggested that Velázquez de León remain in Real de Santa Ana, while d’Auteroche would work in San José del Cabo. What happened as a result?

(a) Astrological, geographic (coordinate system for maps), light wavelength, telescoping

(b) Astronomy would work well in dry climates and gave more scientific evidence for observation

(c) The people except Velazquez de Leon had died due to a sudden epidemic

9. What was notable about the explorations of José Sanchez Labrador?

Jose Sanchez Labrador had dedicated 30 years of his life to exploring the Rio de la Plata as his commitment to understand the region's environment and those who inhabited it

4 Applications, Mayan and Incan Number Systems

Work out the following exercises using the Mayan system.

(a) $365 + 365 = 730$

(b) $1024 - 512 = 512$

Work out the following exercises using the Incan quipu:

(a) $512 + 256 = 768$

(b) $365 - 67 = 298$

3. Suppose we are looking for a set of trees tall enough to supply sixteen four-meter beams. Using the Mayan system, create a calculation showing that the total number of beams is sixty-four.

...

4. Suppose you have six terrace plots in the Andean mountains to use to survive. You and your cohort of fellow Incans decide to grow potatoes and quinoa. Quinoa actually do better at higher altitudes than potatoes. So the plan is to use the two lowest terraces for potatoes, and the upper four for quinoa. Each terrace is 30 meters by 5 meters. A potato plant requires a 0.2 meter by 0.2 meter patch, and a quinoa plant requires a 0.3 meter by 0.3 meter patch. How many potato plants and how many quinoa plants can you plant? Store the results in a diagram of quipu knot system.

...

5 Modern Science in Latin America - Gamma Ray Astrophysics

1. What is a gamma-ray?

- A: A charged particle with mass
- B: A neutral particle with mass
- C: A quantum of light
- D: A radio wave

2. What was the purpose of the Milagro experiment?

- A: To observe the direction of incoming gamma-rays
- B: To observe the energy of incoming gamma-rays
- C: To observe the direction and energy of incoming gamma-rays
- D: To observe the charge of incoming gamma-rays

3. What upgrades to the Milagro concept were made that produced the HAWC design?

- A: Using oil instead of water as the detection medium
- B: Increasing the amount of water tanks to improve the sensitivity
- C: Moving the tanks to a higher altitude
- D: Both B and C

4. List some of the discoveries of HAWC and/or Milagro in the field of gamma-ray astrophysics.

6 Modern Science in Latin America - Cosmic Ray Physics

1. What is the purpose of the Pierre Auger Observatory?

The purpose of the Pierre Auger Observatory is to...

2. What is the typical energy of a cosmic-ray observed at Auger?

- A: 10^{12} eV
- B: 10^{14} eV
- C: 10^{16} eV
- D: 10^{18} eV
