

Midterm - INTD262

Dr. Jordan Hanson - Whittier College Dept. of Physics and Astronomy

October 18, 2024

1 Unit 0

- Offer some reasons why the Spaniards created the *virreinatos* of Nueva España and Perú in their respective locations, with Tenochtitlan and Lima as capital cities.

The Spaniards created the *virreinatos* of Nueva España and Perú in their respective locations for many reasons. Some reasons include having access to the port, this area was also abundant in gold and silver, this area also required some assistance of a government and a military.

- Was there a link between the introduction of capitalism and the growth of scientific activity in Latin America, or did the growth of modern science precede capitalism?

Yes, there was a link. At this time the emergence of both ideals were influencing each other as influential efforts of politics and religion has sway in that of scientific activity.

- Given the definition of *peripheral* scientific activity in the Introduction, can you give an example of the creating and transmission of scientific results from the periphery to the center of science?

Some examples would include

- Give some examples of *pseudo-scientific* beliefs regarding mythical places the colonials sought in the New World.

Some examples include El dorado or the fountain of youth.

5. Multiple Choice - Nahua scientific activity, first period

- Which of the following were media through which inhabitants of the Mexica empire recorded scientific observations about the natural world?

- A: Axolotl (codices) and huitzitzilin (paintings, stelae)
- B: Amoxtl (codices) and tlacuicoll (paintings, stelae)
- C: Tomatl (plume, writing tool) and altepetl (city-state)
- D: Quetzal (plume, writing tool) and huitzitzilin (city-state)

- Using information from *Historia natural y moral de las Indias* (de Acosta), *Historia general y natural de las Indias* (Oviedo), *Décadas del Nuevo Mundo* (Anglería), *Historia de Nueva España* (Hernández), match the European story to the indigenous story or piece of knowledge.

- | | |
|---------|--|
| (1) → D | <ul style="list-style-type: none"> • (1): Ponce de León and the Fountain of Youth • (2): Griffins so large they capture people and calves as prey, with feathers as large as an arm. • (3): "A fountain running with hot water and as the water runs it turns to stone." • (4): "fish that as they leave the water turn into butterflies." • (5): "...a monstrous animal, with the face of a fox, a tail of a cercopithecus, ears of a bat, human hands, and feet of a monkey." Carries young on the belly. |
| (2) → B | |
| (3) → C | |
| (4) → A | |
| (5) → E | |

-
- | | |
|--|---|
| | <ul style="list-style-type: none"> • A: A flying fish • B: A condor • C: A mercury mine • D: The belief about a certain river among the Lucayo and Carib indigenous • E: The Mexican opossum |
|--|---|

6. Nahua scientific activity, second period

- (a) Father Bernardino de Sahagún translates from Nahuatl a description of a "tiger" that the indigenous say can do the following: (a) see small things even though there is fog or darkness (b) creates sounds "through the air" to intimidate hunters. What does this writing tell us about the Nahua understanding of physics?
 This tells us that the Nahua realize the importance of caution and perception. Their understanding of physics was minimal but were able to use it.
- (b) Why did the Spaniards and Aztec believe that hummingbirds were connected to immortality? to their advantage

They connected hummingbirds to immortality because in the winter the hummingbirds would freeze and their heart would stop, but as spring hit, the hummingbirds come back to life, were "reborn".

7. Suppose the following statement is given: "If someone was born between 1945 and 1991, then they have Strontium-90 in their bones." Which of the following statements is deductively valid?

- Adam was born in 1963. Therefore, Adam has Strontium-90 in his bones
- Eve has Strontium-90 in her bones. Therefore, Eve was born between 1945 and 1991.

8. Consider the following passage from Chapter 1 of *The Scientific Attitude*:

In 1981, the state of Arkansas passed Act 590, which required that public school teachers give "balanced treatment" to "creation science" and "evolution science" in the biology classroom. It is clear from the act that religious reasons were not to be offered as support for the truth of creation science, for this would violate federal law. Instead, the curriculum was expected to concentrate only on the "scientific evidence" for creation science. But was there any? And, how precisely was creation science different from creationism?

Explain the arguments used in court to thwart Act 590 the following year.

As far as "scientific evidence" goes it does lack the ideas of empirical evidence. This type of education is one that is important to the experience and steps that goes into it is important but the ideas of creationism is not.

In general creationism typically follows the religious ideas of creation science rather than scientific ones. It is based on the attorney's argument at science

9. Thomas Kuhn wrote a famous book entitled *The Structure of Scientific Revolutions* (1962). Rather than describing science as a global accumulation of progress, he argues that, sociologically, scientists move between periods of "puzzle-solving" within an accepted framework and revolution triggered by unavoidable experimental anomalies. (a) Give one example of a scientific revolution, and note the anomaly. (b) Do you think that the colonization of Nueva España triggered a scientific revolution?

- A) One example of scientific revolution would be the Copernican revolution
 B) It was significant in that it triggered the ~~scientific revolution~~ change in many practices but may have not been the main reason.

10. Fill in Tab. 1 below, using Fig. 1.

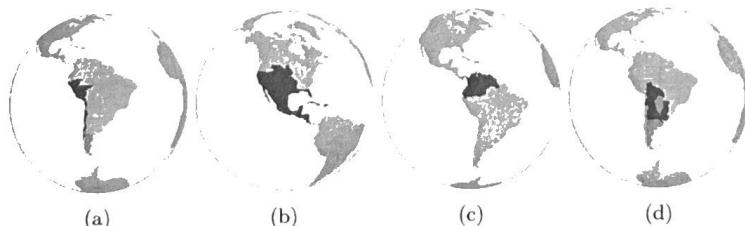

Figure 1: Maps depicting *virreinatos* in Latin America, 17th and 18th centuries.

Map in Fig. 1 (a-d)	Virreinato	Captial
B	Nueva España	Mexico City
C	Nueva Granada	Santafé de Bogotá
D	Río de la Plata	Buenos Aires
A	Perú	Lima (Lima)

Table 1: Fill in the missing information.

11. Consider the library of José Ignacio Bartolache. (a) What does the distribution of texts in this library tell us about the scientific attitude of Latin Americans in the 18th Century? (b) What other scientific items did Bartolache own, and what clues does this add to our picture of the scientific attitude in that time and place? (c) Considering these collections were built before 1760, draw a comparison to the state of science in the American colonies (later the United States).
- a) This exhibited the growing desire for knowledge via text.
- b) Some items that Bartolache owned were that of astronomical instruments and different collections.
- c) I think one of the biggest commodities was that of religious intervention. In the Americas ideas were more open and skeptical in comparison to those from their collections.

2 Unit 1

1. In Chapter 2 of *The Scientific Attitude*, we encounter the following quote:

Samir Okasha recounts the example of John Couch Adams and Urbain Le Verrier ... they were working (independently) within the Newtonian paradigm and noticed a slight perturbation in the orbit of the planet Uranus.

Newton's Law of Gravity predicts perfectly elliptical orbits for the planets, with no perturbations. Was the law of gravity therefore falsified? What solved the problem in the end?

No, it was not. But this gave physics more room to explore even in the different entities. Through the discovery of Neptune the problem was solved.

2. **Bode's Law** was an attempted mathematical explanation of the planetary orbits. Bode's sequence was the pattern 0, 3, 6, 12, 24, ..., plus 4 to each, then divide the sequence by 10. The result is 0.4, 0.7, 1.0, 1.6, 2.8, 5.2, 10.0, 19.6, 38.8, 77.2, At the time (1772), the radii of the planets from the Sun were 0.387, 0.723, 1.0, 1.524, 5.203, 9.539. Nine years later, Uranus was discovered at 19.18. Twenty years later, the asteroid belt between Mars and Jupiter was discovered at 2.77. Did Bode's Law become a scientific fact because it fit the data?

This theory and calculations were extremely important and influential. It was not deemed a scientific fact. This is because theoretical support was scarce in helping the predictions.

3. In 1761, Judge Francisco Javier Gamboa created a set of legal and scientific studies that were meant to reform the mining industry, to make it more efficient. Recall some scientific results that he shared within his *Comentarios a las ordenanzas de minas*. What chemicometallurgical technique, important for ore extraction, did he share with The Crown? What institutions did he suggest creating?

He shared ideas of educational institutions and scientific research organizations. These ideas were created due to the goal of efficiency using mercury to extract silver from ore.

4. *El Real Seminario de Minería* was created by Joaquín Velázquez de León, Fausto de Elhúyar, and others. However, several factors might have driven it to bankruptcy. Describe the Mexican efforts to preserve it.

The Mexican efforts included government support and funding, curriculum expansion, promoting research and public awareness.

5. What are the two tenets of the scientific attitude, or ethos, according to the author of *The Scientific Attitude*?

The two are empirical evidence and skepticism.

6. Recall the story of Ignaz Semmelweis and antiseptic handwashing in maternity wards. Discuss how the scientific attitude was applied in this situation.

The scientific attitude was applied by various methods and trials and errors. This investigation included observations, data collection, hypothesis, and testing.

7. Recall the story of the false discovery of cold fusion. (a) Discuss how the scientific attitude was not applied in this situation. (b) Now select a piece of science from Latin American history that we have encountered thus far, and apply the criteria of the scientific attitude to it.

a) The scientific attitude was not applied in this situation due to lack of testing, disinterestedness, and the lack of peer support.

b) In talk about home remedies or even in the case of quinine we might not use the scientific method to test, make assumptions and figure out what works best.

3 Unit 2

1. (a) In what viceroyalty (Fig. 1) was the city of Santa Fe de Bogotá? (b) Discuss the scientific implications of the "half century-long polemic on Copernican theories, which started in 1773 between José Celestino Mutis and the Dominican Congregation of Santa Fe de Bogotá. (c) In 1783, the Expedición Botánica began in Santa Fe. What were some of its goals and achievements?

(a) It was in New Granada

(b) There were many different interpretations of Christianity dogma, raising questions, standing up to resistance and the educational differences

(c) Some achievements were that of economic development, scientific collaboration, and cultural exchange.

2. (a) In what viceroyalty (Fig. 1) was the city of Caracas? (b) In 1767, the Jesuit order was expelled from the Spanish colonies. The Dominican order recovered authority over some colleges and universities. What was the implication for science?

(a) It was in place now called Colombia, Ecuador, Panama, + Venezuela

(b) Some implications were that the educational control changed as well as the scientific networks and its impact on scientific inquiry.

3. What scientific publication was created by José Celestino Mutis?

A scientific publication by José Celestino Mutis was the "Florula Exotica!"

4. Evaluate the logical truth of this claim: "anti-vaccination campaigns do not have the scientific attitude, therefore these are not scientific endeavors."

Although the premise of the argument makes sense, one may does not conclude to another. The boundaries of scientific endeavors have standards but not limits

5. Discuss one example we have encountered from our scientific history that should count as science, even though it has not traditionally been considered scientific.

From our scientific history the traditional home remedies of herbs and plants that help sick and weakness and troubles.

6. In Chapter 3 of *Science in Latin America*, we encounter the following quote:

La Universidad Gregoriana in Quito alone had "seventy-one foreign professors teaching at the university ... Native professors were twenty-one, of whom five were from Loja, four from Quito, three from Guayas, three from Cuenca, three from Riobamba, two from Ibarra, and one from Ambato." ... As a consequence, it is not strange that in a center of cultural ferment such as Quito, intellectual Jesuits were most closely linked to the Franco-Spanish geodetic mission directed by La Condamine and Jorge Juan.

- (a) What scientific transition began to take place as a result of the interaction between foreign and Ecuadorian professors? (b) What can we infer about the ratio of the native professors at the university? (c) Consider Father Francisco Javier Aguilera, who taught physics and mathematics at Universidad Gregoriana. He taught no less than five world systems, and focused on three: Ptolemaic, Copernican, and Tychonic. What distinguished these?

(A) Integration of European methods and the ideology of rationalism.

(B) There were more professors than their own students.

(C) Ptolemaic-Earth is at the center Copernican - Sun is at the center Tychonic

7. In 1767, Mutis published *Reflexiones sobre el sistema tycónico*. (a) What were the main points of this publication? (b) Was it considered controversial?

(a) His main point was comparing the geocentric and heliocentric theories. Earth in the center but sun with regular orbits

(b) Yes, because most people wanted the geocentric view to prevail.

8. When Joaquín Velázquez de León and José de Gálvez arrived in Baja California, they remained there for three years. (a) What types of measurements did they make? (b) How did this improve local knowledge of Nueva España? (c) Velázquez de León communicated with Chappe d'Auteroche that he would help with the Venus transit measurements, and d'Auteroche suggested that Velázquez de León remain in Real de Santa Ana, while

(a) Geodetic, astronomical, topographic, hydrological measurements.

(b) These studies ~~enriched~~ 4 mapping and laid the foundations of future

(c) Leon and Gálvez contributed a lot with the Venus transit ~~great~~ shared good ~~experience~~ practices

d'Auteroche would work in San José del Cabo. What happened as a result?

9. What was notable about the explorations of José Sanchez Labrador?

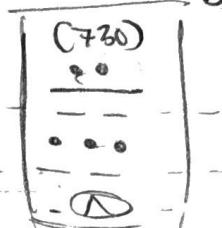

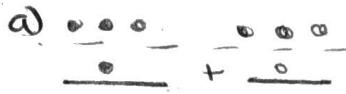

They were notable by the extensive data of flora and mineral sources, as well as the communications with indigenous people and their scientific contributions.

4 Applications, Mayan and Incan Number Systems

b)

1. Work out the following exercises using the Mayan system.

(a) $365 + 365 =$

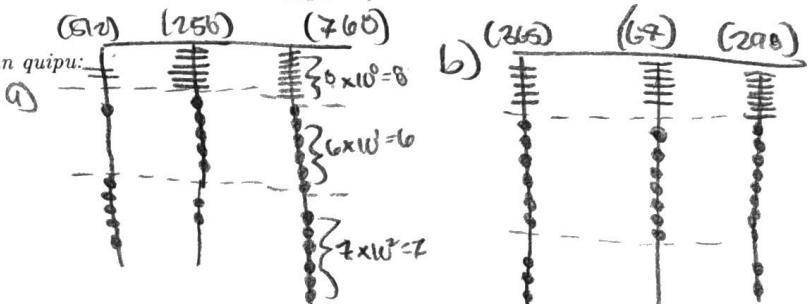

(b) $1024 - 512 =$

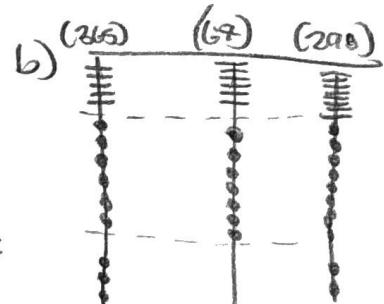

2. Work out the following exercises using the Incan quipu:

(a) $512 + 256 = 768$

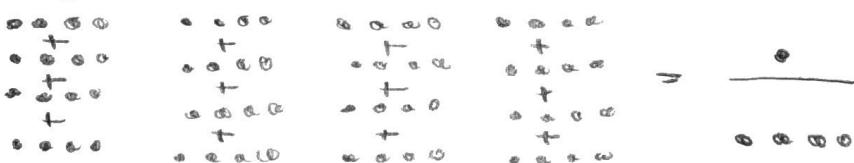

(b) $365 - 67 = 298$

3. Suppose we are looking for a set of trees tall enough to supply sixteen four-meter beams. Using the Mayan system, create a calculation showing that the total number of beams is sixty-four.

$16 \times 4 = 64$

4. Suppose you have six terrace plots in the Andean mountains to use to survive. You and your cohort of fellow Incans decide to grow potatoes and quinoa. Quinoa actually do better at higher altitudes than potatoes. So the plan is to use the two lowest terraces for potatoes, and the upper four for quinoa. Each terrace is 30 meters by 5 meters. A potato plant requires a 0.2 meter by 0.2 meter patch, and a quinoa plant requires a 0.3 meter by 0.3 meter patch. How many potato plants and how many quinoa plants can you plant? Store the results in a diagram of quipu knot system.

$30m \times 5m = 150m^2$
100m²

Potatoes = $2 \times 150m^2 = 300m^2$
Quinoa = $4 \times 150m^2 = 600m^2$
 $\frac{300m^2}{0.04m^2} = 7500$ potato plants
 $\frac{600m^2}{0.09m^2} = 6666.67$

5 Modern Science in Latin America - Gamma Ray Astrophysics

1. What is a gamma-ray?

- A: A charged particle with mass
- B: A neutral particle with mass
- C: A quantum of light
- D: A radio wave

2. What was the purpose of the Milagro experiment?
- A: To observe the direction of incoming gamma-rays
 - B: To observe the energy of incoming gamma-rays
 - C: To observe the direction and energy of incoming gamma-rays
 - D: To observe the charge of incoming gamma-rays
3. What upgrades to the Milagro concept were made that produced the HAWC design?
- A: Using oil instead of water as the detection medium
 - B: Increasing the amount of water tanks to improve the sensitivity
 - C: Moving the tanks to a higher altitude
 - D: Both B and C
4. List some of the discoveries of HAWC and/or Milagro in the field of gamma-ray astrophysics.

Milagro

- TeV Gamma-Ray Source
- Supernova Remnants
- Galaxies

HAWC

- High-energy cosmic rays
- neutrinos from Milagro Ray
- evidence of dark matter,

6 Modern Science in Latin America - Cosmic Ray Physics

1. What is the purpose of the Pierre Auger Observatory?
- To study ultra-high-energy neutrinos that detect cosmic rays, understanding sources and acceleration processes, for astrophysics and fundamental physics.
2. What is the typical energy of a cosmic-ray observed at Auger?

- A: 10^{12} eV
- B: 10^{14} eV
- C: 10^{16} eV
- D: 10^{18} eV
