Midterm - INTD290

Dr. Jordan Hanson - Whittier College Dept. of Physics and Astronomy February 5, 2021

How to Submit this Midterm 1

- 1. Complete your work on this midterm.
- 2. Scan it into PDF form using a smartphone app, scanner, or digital picture
- 3. Alternatively you can type up your answers in a separate file, but it still must be a PDF
- 4. Submit it using the link on Moodle

2 Maps of The New World

Figure 1: There were up to four virreinatos during the Spanish colonial period of Latin American history.

- 1. In which of the four virreinatos of the Spanish colonial empire (shown in Fig. 1) was the tle huitzilin classified by the indigenous? Virreinato 2 (neva españa)
- 2. Which of the four *virreinatos* excelled at the exportation of rum?
- 3. Which of the four virreinatos was characterized by an indigenous empire that mastered agriculture in the Andean
- 4. The low-latitude aurora of 1789 was observed in which cities? In which of the four virreinatos are these cities?
- List some other countries in which corresponding observations were made.

 List some of the locations explored by La Condamine and his Latin American collegues, and cite the virreinato or virreinatos they explored together. La Condamine and his Latin American collegues, and cite the virreinato or virreinatos they explored together. La Condamine and his Latin American collegues, and cite the virreinato or virreinatos they explored together. La Condamine and his Latin American collegues, and cite the virreinato or virreinatos de Celestino Mutis took place in which virreinato?
- José Celestino Mutis took place in which virreinato? Mutis was the inaugural chair of the department of mathematics at the Colegio del Rosario. In which city is this? In Janta Fe de Rogota (virreinato?)
- 8. In which country is the Pierre Auger Observatory located? In which virreinato would this country have been in virreinato 4 (Río de la plator)

Figure 2: (Left) A physics detector near Pico de Orizaba in Mexico. (Right) A town in central Mexico.

Figure 3: A historical location in Latin America known for driving a particular economic sector.

3 Asynchronous Activity Review I

- 1. What is the physics detector shown in Fig. 2 (left)? Explain in basic terms the purpose of this detector and how it works. It is a cosmic ray detector. It works by sensing the angle and energy of the ray based off of the detectable variation that it gives off when it hits a pool of water (the detector pool shown above).
 - 2. What is the significance of Mexican cities as pictured in Fig. 2 (right), in the context of the development of colleges and the scientific community in 18th century Mexico?

 Rapid booms in the productivity of mines, and the explansion of cities brought a need for experts and professionals to maintain that georous. "Useful arts" were taught in newly established colleges and It also sparked an interest in science and madern thought.
 - 3. What city is being shown in Fig. 3? In which country is it located, and what was the historical significance of this city for international trade? Who controlled it? From where the commodity produced here originate, and how was it shipped to Europe and Africa? That is Pofosi, Bolivia and it is his farically significant because of its vast silve mines. It was controlled from the silver. I am not completely sure about the details of silver transport, but the inaccused trade certainly opened up the economy and trade of the larger bath America.

4 Asynchronous Activity Review II

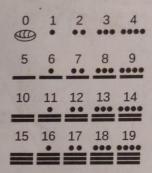

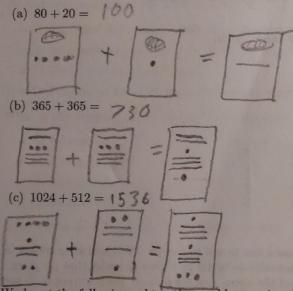

Figure 4: A list of the numerical digits used by the Maya.

1. Work out the following addition problems using the Mayan system.

2. Work out the following subtraction problems using the Mayan system.

3. Work out the following addition problems using the Incan quipu:

3

(a)
$$512 + 256 = 768$$

T

(b) $11 + 89 = 100$

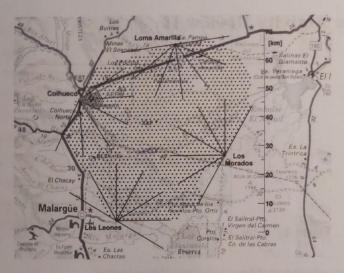

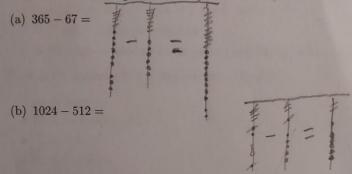

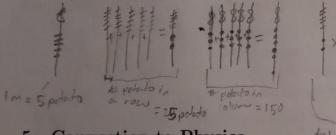

Figure 5: A physics detector near Malargüe, Argentina.

4. Work out the following subtraction problems using the Incan quipu:

5. Suppose you have six terrace plots in the Andean mountains to use to survive. You and your cohort of fellow Incans decide to grow potatoes and quinoa. Quinoa actually do better at higher altitudes that potatoes. So the plan is to use the two lowest terraces for potatoes, and the upper four for quinoa. Each terrace is 30 meters by 5 meters. A potato plant requires a 0.2 meter by 0.2 meter patch, and a quinoa plant requires a 0.3 meter by 0.3 meter patch. How many potato plants and how many quinoa plants can you plant? Store the results in a diagram of quipu knot system.

5 Connection to Physics

- 1. In Fig. 5, what physics detector is shown?
 - A: The Large Hadron Collider
 - B: The IceCube Neutrino detector
 - C The Pierre Auger Observatory
 - D: The High Altitude Water Cherenkov detector
- 2. What is the purpose of the physics project shown in Fig. 5?
 - A: To collide protons and nuclei to probe sub-atomic physics
 - B: To detect signals from neutrinos that originate outside the solar system
 - (C). To detect cosmic rays that originate outside the solar system
 - D: To detect gamma rays from space

- 3. What is a gamma ray?
 - · (A) A photon of light
 - B: A proton or nucleus from deep space
 - · C: A portion of the aurora borealis
 - D: An ion floating in the atmosphere
- 4. What is located at each black dot in Fig. 5?
 - A A water tank designed to record Cherenkov radiation
 - B: A radio receiver designed to record radio pulses
 - C: An optical sensor designed to record visible light
 - D: A telescope designed to detect infrared radiation

6 Vocabulary

- 1. What is the meaning of the term rationalism?
 - A: The idea that reason rather than experience is the foundation of certainty in knowledge
 - B: Encapsulating the idea of I think, therefore I am.
 - C: Using scientific instruments
 - D: Relying on measurements and sensory experience to discover the truth
- 2. What is the meaning of the Nahuatl term abuizotl?
 - A: A horse
 - B: A hummingbird
 - C An otter
 - D: An alligator
- 3. What is the meaning of the Nahuatl term tomatl?
 - · A: Smoked fish
 - · B: Smoked chili
 - C: An herb to help digestion
 - D. A tomato
- 4. What is cinchona?
 - A: An herb used to treat indigestion
 - B) A shrub or tree used to create quinine
 - C: A flower used in religious rituals of the Mexica people
 - D: A plant that can form a treatment for syphilis
- 5. Define the word torpor, as it pertains to animal behavior.
 - A: The ability hover in midair during flight using rapid wingbeats
 - B Lowering internal body temperature and metabolism to levels that render the individual immobile and in a hibernating state
 - C: The ability to break open the shells of mollusks using tools
 - D: The ability to distinguish complex sounds in songs or calls
- 6. Who were the Jesuits?
 - A: Formally known as the Order of Preachers, this is a Catholic order founded by Saint Dominic
 - . B: Formally known as the Order of Friars Minor, this is a Catholic order founded by Saint Francis
 - C: Formally known as Los Amigos del País, these were mining officials who formed guids to further economic interests of their region
 - D Formally known as the Society of Jesus, this is a Catholic order founded by Saint Ignatius of Loyola

7 Free Response Section

1. Kepler's Laws, and Newtonian Physics Discuss the varying levels of acceptance within scientific and academic communities in Nueva Granada and Perú in the late 18th century. The battle to bring Eulighterment ideals to Nueva Granada and par was offer hard bought as strong religious restrictions were placed on the Universities. Professors from within universities trick to bring modern science Into the corriculum and they were able to maintain that curriculum until inquisition and scholasticism returned religion to the education. This was largely because of the control siezed by the Pominican order (pushed for scholasticism) after the Jourts were 2. The aurora of 1789 Discuss the significance of the aurora borealis in 1789 that was visible from Mexico City. List several researchers who made observations of this aurora and other auroras, and explain what they found. The low-latitude aurora observed by José Antonio Alente and Antonio de Loon y Gama was significant because no aurora has ever been recorded so low and it sparked scientific in guing across the globe. Alreate y Raminez looked at this phenomenan as a pattern and noted that it would be observable in other countries. This discovery put but in America on the map, so to speak, of world science. Othersenho joined there each were -> 3. Herbal medicine in the 16th century Give several examples of treatments for various ailments in the body used by Europeans and indigenous Latin Americans in the 16th century. Explain the theory of the four humors and why this influenced the European treatments but not the indigenous ones. Pre - Enlightament wed one versived around the notion that all disease could be explained by imbalance to America sought out herbs that they could in corporate into their four humors model without realizing float indigenous treatments (based on generations of herbal medicine) were much more effective, Using trappath with atole, the natives were able to ease gartointerthal ilnes much more 4. The Inquisition, the Catholic Church, and Scientific Traditions Discuss several examples of the following: effectively (a) Catholic censorship of knowledge flowing from Europe to Latin America (b) Catholic censorship of knowledge flowing from Latin America to Europe (c) contributions to Latin American science by Catholic scholars and explorers (d) knowledge that was recorded or translated from indigenous sources by Catholic priests, monks, or a) In the Viceroyalty of fero, the illegal impostfation of french and Spanish Enlighter ment fexts caused the intervention of catholic inquisitors and bans on certain abthors. b) In Mexico, Jose Anton's Hate & Ramivez began several scientific journals that ever reallist Europe, but not without attempts to shut down and densor him. c) Algate was a catholic priest who contributed to lath densican traveledge, but other clargy members such a father lisness also propagated that knowledge through books form, a) Further Barnardono de Sahagin Z. ants: Sir Elmind Halley in Britain, Ber Franklin in the colonier, and Jean-Jacques Vartous de Mairan in France 4. cont d: was able to keep some record of Mexican medicine and Nahout) Outwein the 16th Centery Father Diego Dovan also recorded native descriptions of the huitzilin and the spiritual connection that it held to Huitzilopolhtli.
